

San Bernardino County

Zip Code Profiles of Selected  
Maternal Health and Infant Death Data  
1989–1993

Prepared by:  
San Bernardino County, Department of Public Health  
Program Analysis and Statistics  
September, 1995

## Acknowledgments

This report was prepared by Eugene Jenkins of the Program Analysis and Statistics Section. Others contributing to this report include Thomas J. Prendergast, Jr., M.D., Director of Public Health and Colleen Tracy, M.P.H., Program Analysis and Statistics program manager. Also, clerical support from Laura Dobbs is gratefully acknowledged.

The California Department of Health Services, Center for Health Statistics was the original source for the County and State of the raw data used in this report. Any analyses, interpretations, or conclusions, are the author's.

Users are welcome to reproduce or quote this document in whole or in part provided that acknowledgment is given. ## **Introduction**

The main purpose of this report is to examine various maternal health and infant death data in San Bernardino County at the zip code level. The variables are: 1) total live births, 2) low birthweight live births, 3) very low birthweight live births, 4) month mother entered into prenatal care, 5) live births to teen mothers, and 6) infant mortality. Because rates at the zip code level are often unreliable due to the small numbers of events, a five-year period, 1989-1993, has been selected for review.

The rural nature of most of San Bernardino County results in several zip codes with small numbers of live births reported annually. After examining the number of live births reported at the zip code level, an annual average of 90 live births was selected as the cut-off point. Forty-three (43) zip codes had 90 or more. The number of births reported annually dropped sharply for zip codes with fewer than 90. Although the zip codes with small numbers of live births are not reported individually, the figures are included in the County totals and, in most cases, city/area totals.

Race and Ethnic detail is provided for the following three mutually exclusive groups: black, non-Hispanic; white, non-Hispanic; and Hispanic. These groups are referred to as black, white, and Hispanic in this report. Live births in these three groups accounted for slightly more than 95 percent of all San Bernardino County live births over the review period. The race/ethnicity used in this report is that reported by the mother on the certificate of live birth.

## **Small Numbers**

Even though there may be several hundred births reported annually in a given zip code, the rates (or percentages) calculated may still be unreliable due to the small number of events in the numerator, especially at the race/ethnicity level. Rates calculated with fewer than 20 events are considered unreliable and should be interpreted with caution. In these cases it is recommended that more than one year be considered. This can be done by either looking at all five years of annual rates provided or using the five-year rate. (It should be noted that the five-year rate is not an average of the five annual rates, but rather the sum of the five years of data divided by the sum of the five years of denominator data, multiplied by 100.)

## **Zip Code and City/Area Profiles**

Data at the zip code level has been provided for the 43 San Bernardino County zip codes listed in Table 1. The zip code profiles are presented in Appendix B.

Data at the city/area level is presented in Appendix C, sorted by city name. A complete list of these areas is shown in Table 2. Each profile consists of one or more zip codes as described below.

- C      Cities listed in Table 1 with only one zip code are listed by the associated city name.

- C Cities with more than one zip code include combined data from all zip codes for that city.
- C Communities too small (ie. fewer than 90 births annually) to be included in the zip code profiles are grouped with other small, neighboring communities. These areas are listed under the name of the larger community. The communities in this category are shown in Table 3 with the zip codes and community names that are combined to define the area.

Since zip codes do not generally follow city boundaries, the group of zip codes is referred to as an area, not a city. For example, all of the City of San Bernardino zip codes make up the San Bernardino area.

Note: This table lists five areas from Table 2 that consist of more than one city/community.

## San Bernardino County Compared to California

In the following pages San Bernardino County's experience is compared to California for the maternal health and infant death data selected for analysis in the zip code profiles. County and State data is provided for the same five-year period (1989-1993) so comparisons can be made. For each of the variables, the overall rates are displayed Figures 2 through 7. Data by race/ethnicity are shown, along with the overall rates, in Tables 4 through 9.

For each of the variables studied, San Bernardino County's overall rates were worse than the state figures every year of the review period (figures 2 through 7). With a few exceptions, the rates for the same variables by race/ethnicity of mother were worse than the state as well (tables 4 through 9). It is interesting to note that the State and County overall rates, for each variable, follow similar trends from 1989 to 1993.

Due to the high interest in infant mortality, Figure 1 has been included to show the United States, California, and San Bernardino County trends in infant mortality in the years leading up to the five-year review period. From 1970 until 1983 San Bernardino County's infant mortality rate was below the national rate. Then, for eight of the next nine years, the county rate was as high or higher than the United States rate. In 1993, the county rate dropped below the national rate.

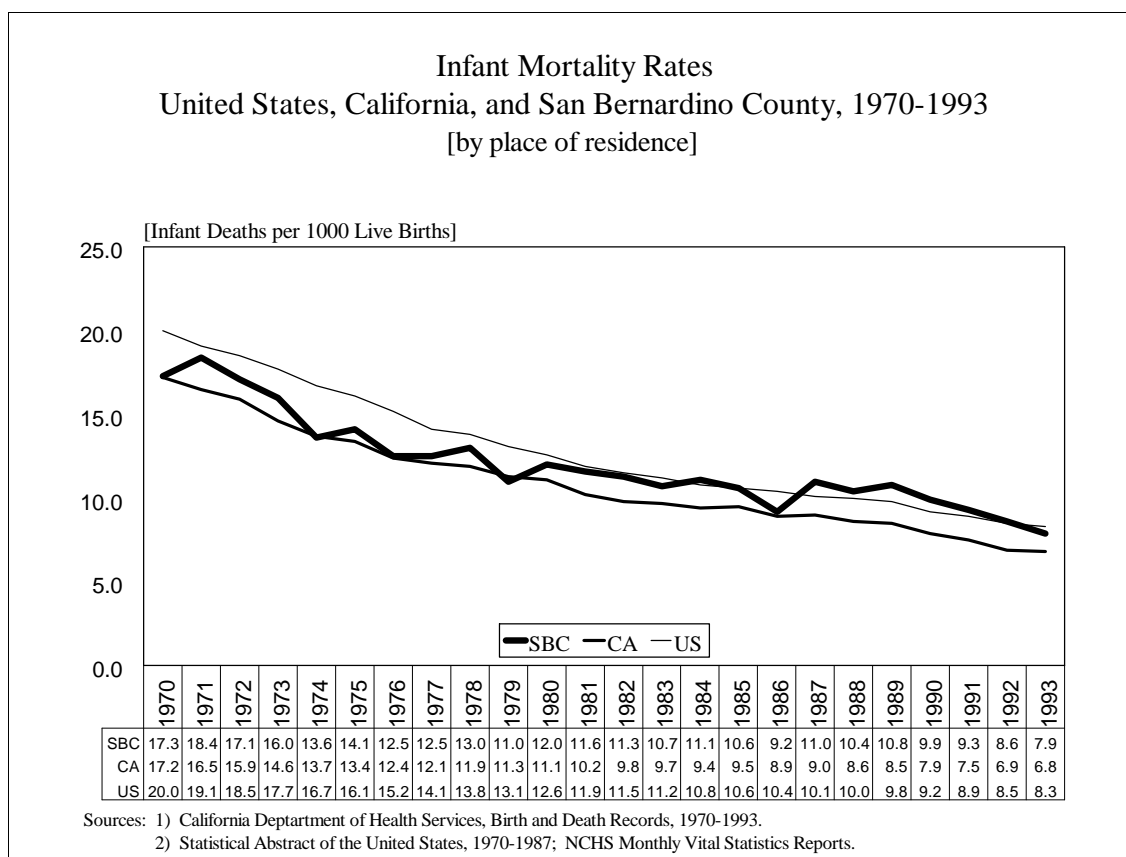

Figure 1

## Low Birthweight Live Births (under 2500 grams)

The San Bernardino County percentage of low birthweight live births is consistently higher than the State rate each year of the review period (figure 2). The County and the State had slightly lower rates in 1993 than 1989. In San Bernardino County, Hispanics and whites had rates as high or higher than the State each year. Blacks, however, had slightly lower rates than the state the first four years (table 4).

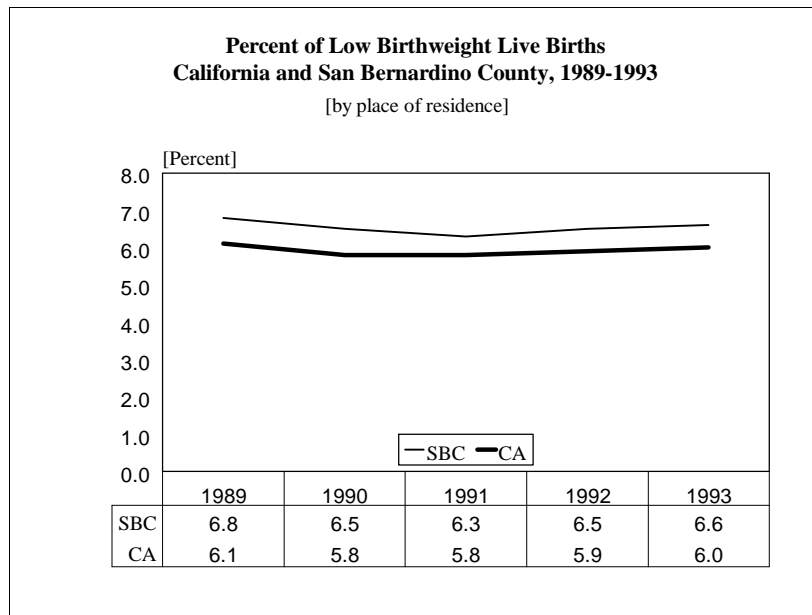

Figure 2

Percent of Low Birthweight Live Births by Race/Ethnicity California and San Bernardino County, 1989-1993					
Race/Ethnicity of Mother	Year				
	1989	1990	1991	1992	1993
<b>State of California</b>					
Total	6.1	5.8	5.8	5.9	6.0

2) CA Dept. of Health Services, Birth Master Files, 1989-1993.

Table 4

## Very Low Birthweight (under 1500 grams)

San Bernardino County had a higher percentage of very low birthweight live births than California every year from 1989 to 1993 (figure 3). Both the County and State experienced higher rates of very low birthweight in 1989 than any subsequent year. At the race/ethnicity level, the percentage of low birthweight live births in the County was as high or higher than the state every year, except for blacks, in 1989 (table 5).

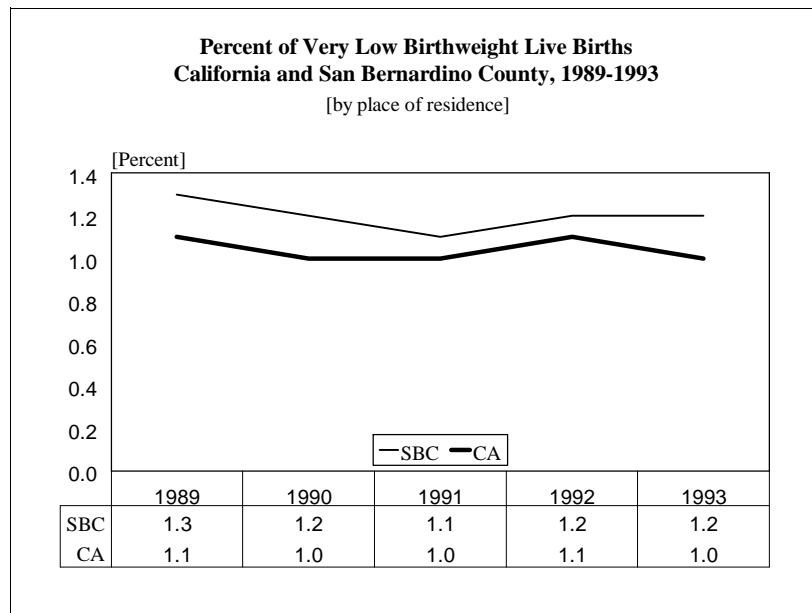

Figure 3

Percent Very Low Birthweight Live Births by Race/Ethnicity California and San Bernardino County, 1989-1993					
Race/Ethnicity of Mother	Year				
	1989	1990	1991	1992	1993
<b>State of California</b>					
Total	1.1	1.0	1.0	1.1	1.0

2) CA Dept. of Health Services, Birth Master Files, 1989-1993.

Table 5

## Late or No Prenatal Care

Both San Bernardino County and California appear to have experienced downward trends in the percentage of mothers receiving late or no prenatal care (figure 4). The San Bernardino County rate for black mothers was higher than the corresponding State rate each year except 1992 (table 6). The County rate for Hispanics was as high or higher than the state four of the five years. The rate for whites, however, was substantially higher than the California rate for whites all five years.

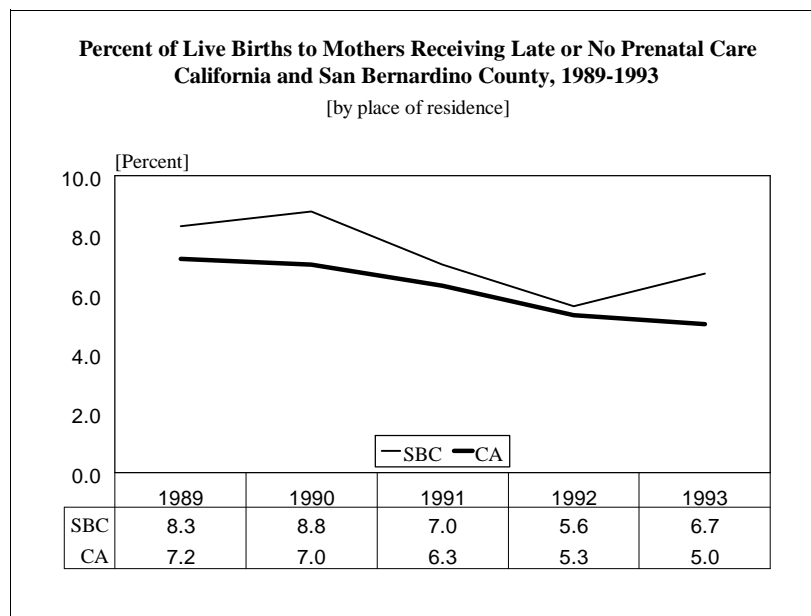

Figure 4

Percent of Live Births to Mothers Receiving Late or No Prenatal Care California and San Bernardino County, 1989-1993					
Race/Ethnicity of Mother	Year				
	1989	1990	1991	1992	1993
<b>State of California</b>					
Total	7.2	7.0	6.3	5.3	5.0
Black	8.5	7.5	6.8	6.3	5.8
Hispanic	11.5	11.0	9.7	7.8	7.0
White	3.8	3.6	3.2	2.7	2.9
<b>San Bernardino County</b>					
Total	8.3	8.8	7.0	5.6	6.7
Black	9.6	9.8	8.3	5.8	6.8
Hispanic	12.1	13.4	9.7	7.6	8.8
White	5.7	6.1	4.7	3.8	4.8

Sources: 1) CA Dept. of Health Services, Birth Cohort Files, 1989-1992; Summary Birth File, 1993.  
2) CA Dept. of Health Services, Birth Master Files, 1989-1993.

Table 6

## Live Births to Mothers 17 and Younger

The percentage of live births to mothers 17 and younger increased each year of the review period in San Bernardino County and the State (figure 5). Again, San Bernardino County had a higher proportion than California each of the five years. The proportion of live births to black mothers in San Bernardino County was slightly lower than the State proportion for blacks the first four years (table 7). The proportion for both Hispanics and whites in San Bernardino County were higher than the corresponding State proportions all five years.

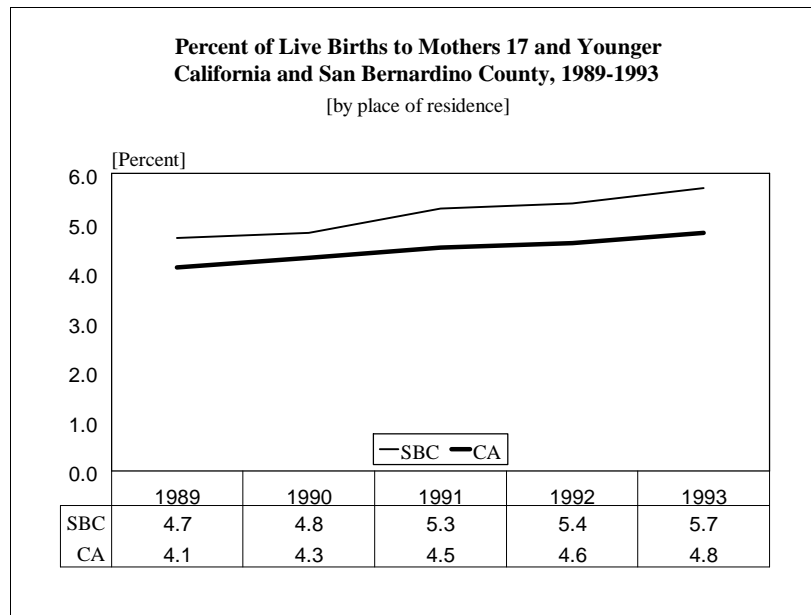

Figure 5

Percent of Live Births to Mothers 17 and Younger by Race/Ethn. California and San Bernardino County, 1989-1993					
Race/Ethnicity of Mother	Year				
	1989	1990	1991	1992	1993
<b>State of California</b>

White	3.3	3.6	3.7	3.7	4.0

Sources: 1) CA Dept. of Health Services, Birth Cohort Files, 1989-1992; Summary Birth File, 1993.  
2) CA Dept. of Health Services, Birth Master Files, 1989-1993.

Table 7

## Live Births to Mothers 19 and Younger

The percentage of live births to teens in California and San Bernardino County was higher in 1993 than 1989 (figure 6). The trends lines for the two jurisdictions nearly parallel each other. Both increase each year except from 1991 to 1992 when the State proportion does not change and the County proportion drops slightly. The proportion for blacks in San Bernardino County was higher than the State proportion for blacks each year except 1989 (table 8). Proportions for Hispanics and whites in San Bernardino County were higher than the state proportions all five years. Hispanic proportions, however, were only slightly higher, while the white proportions were much higher every year.

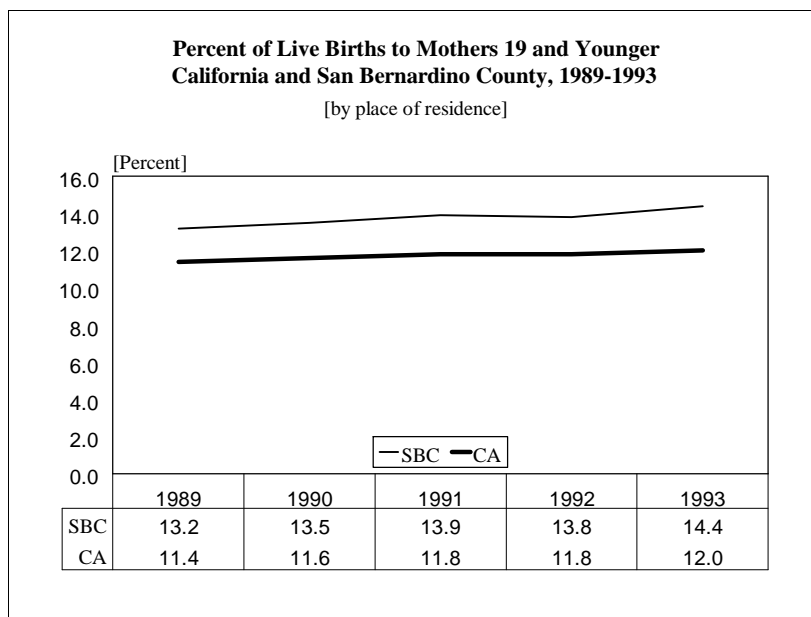

Figure 6

Percent of Live Births to Mothers 19 and Younger by Race/Ethn. California and San Bernardino County, 1989-1993

2) CA Dept. of Health Services, Birth Master Files, 1989-1993.

Table 8

## Infant Mortality

The infant mortality rates for both California and San Bernardino County declined each year from 1989 to 1993 (figure 7). The San Bernardino County rate declined 26.9 percent, while the California rate declined 20 percent over the same time period. The County's rate for all three race/ethnicity groups was higher than the State rate each year of the review period (table 9).

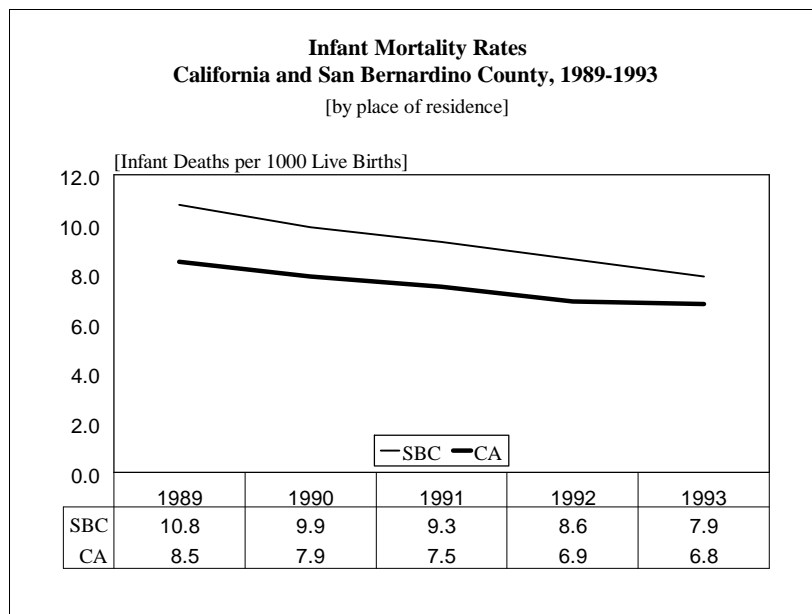

Figure 7

Table 9

## **Zip Code Summary**

The 43 San Bernardino County zip codes are summarized in Table 10 on the following page. The five-year rates (or percentages) for each of the maternal health variables detailed in the zip code profiles are listed and ranked in the table. The highest rate is ranked 1 and the lowest rate is ranked 43. Table 10 is sorted in zip code order. Table 11 is the same table sorted by infant mortality rate. Again, the highest infant mortality rate is ranked 1 and the lowest infant mortality rate is ranked 43.

It is important to keep in mind when interpreting the rates, comparing one zip code to another, or comparing zip code rates to the County or State rates, a small change in the number of events may change the rate and the rank order of the rate or percentage. This is especially true of the smaller zip codes. For comparison, the number of live births and infant deaths for the five-year period have been listed for each zip code. It is recommended that when comparisons are made between zip codes, the zip code profiles be referenced to see the actual number of events used to calculate the rate. The larger the number of events, the more reliable the rate.

As noted in both tables, very low birthweight (<1500 grams) is a subset of low birthweight (<2500 grams). Consequently, the rates for these two variables are expected to be related. Similarly, the percentage of live births to mothers under age 18 is a subset of live births to mothers under age 20. These two variables will also be related.

The zip codes with the highest percentages of low and very low birthweight live births, live births to mothers receiving late or no prenatal care, and live births to mothers under age 18 or under age 20 can be easily identified in Table 10. The correlation of these same variables with infant mortality can be seen in Table 11. The zip codes with the highest infant mortality rates tend to also have the highest percentages (and ranks) of variables being studied.

**Table 10**

92411	58	3,463	1.8	3	9.0	3	14.5	2	10.2	1	22.1	1	16.7	2

(\*) Ranks are based on the percentage or rate of each variable. The highest rate was ranked 1; the lowest rate was ranked 43.

Notes: 1) Very low birthweight (VLBW) are live births under 1500 grams. 2) Low birthweight (LBW) are all live births under 2500 grams. 3) Late/No Care represents mother's beginning prenatal care in the 3rd trimester or not receiving any prenatal care. 4) The categories Moms < 18 and Moms < 20 refer to live births to mothers under 18 and 20 years, respectively. 5) Because the very low birthweight counts are a subset of low birthweight, the percentages and ranks are expected to be correlated. The same is true of the two variables by mothers age. 6) It is important to consider the magnitude of the numbers used to calculate the rates or percentages. Rates calculated with small numbers are highly unreliable.

Infant Mortality Rate (per 1000 live births)		10.8	9.9	9.3	8.6	7.9	9.3

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.4

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.5

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.3

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.7 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.3 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	6.4 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	10.4 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

<b>Infant Mortality Rate (per 1000 live births)</b>		*	*	*	*	*	3.8 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	7.6

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	23.9 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	7.3 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	9.0

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	11.3

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	11.5

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Late prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.3 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother.

4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	8.5

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother. 4) Prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	13.6 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother.

4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	10.1 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother. 4) prenatal care is defined as entering care in the 3rd trimester. The calculation of "Percent Late or No Care" excludes unknown entry into care. 5) Rates (or percentages) calculated using small numbers are unreliable. 6) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	11.0 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother.

4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	7.4 **

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

(\*\*) The five-year infant mortality rate was calculated using fewer than 20 infant deaths and is unreliable.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother.

4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.

	Post-Neonatal	2	1	0	0	0	
	Percent of SBC Hispanic Infant Deaths	3.85	4.95	2.02	0.93	2.13	2.77
White, Non-Hispanic		4	4	6	3	4	
	Neonatal	1	2	5	2	4	
	Post-Neonatal	3	2	1	1	0	
	Percent of SBC White, Non-Hisp. Infant Deaths	2.60	2.48	4.44	2.78	3.88	3.18
Infant Mortality Rate (per 1000 live births)		*	*	*	*	*	7.4

(1) The five-year rate is cumulative and should not be confused with a five-year annual average.

(...) Zero events in specified year.

(\*) The annual infant mortality rate is not calculated for fewer than 20 deaths.

Notes: 1) Resident data. 2) Residence determined by zip code of residence as reported on the certificate of live birth and death certificate. 3) Live birth data is by race/ethnicity of mother. 4) Rates (or percentages) calculated using small numbers are unreliable. 5) Live birth data is by race/ethnicity of mother.
